PROJECTS

Sopping Cart

I made a website with a shopping cart for a confectionary store. The features include: • User part – Here users can view the products, choose different products to own cart and finally can place an order. • Admin part – Here admin can add, delete, update the products, manage the order, and can also, change the password.

🔗 https://github.com/sourabhku88/shooping-cart

Blog

I made a website where only authorized people can log in for viewing the details about Blogs. Here the person can add Blogs, Update Blogs, Delete blogs, and filter Blogs. It is a blogging platform like Medium and Quora

🔗 https://github.com/sourabhku88/project-blog

Intern

It is a platform for organizations and colleges to help them with internships or during campus placements. It has two interfaces one for college and another one for the organization. The college interface has two interfaces one for registration of college and another one for registration of students. And the interface of the organization has one feature for getting details about students

Book managment

I made a website where only authorized authors can log and view detail of books, update and delete and filter books also in this project when any user reviews so increase the count of reviews and delete reviews.

Url Shortner

It is a URL shortener platform like bitly and tiny URL. It has two features. It shorts a URL entered by the user and stores it in cache memory as well. And the second feature is to get the shorted URL. So the user will get the shorted URL from cache memory. I used caching while generating the short URL to minimize database calls.
